LRS®
OUTPUT MANAGEMENT

drivve | **e·BRIDGE** CERTIFIED

- Drivve | Image is a high-performance, feature-rich, on-premise scanning solution that enhances document workflows and seamlessly integrates them into your information management infrastructure.

- Drivve | Image software optimizes business processes by intelligently capturing, processing and distributing document data with built-in security. The solution offers a variety of connectors, and comes with powerful built-in OCR (optical character recognition) and document process automation technologies.

- Drivve | Image is simple to use, set up and configure, and includes easy to implement single-sign-on connections to print management solutions.

FEATURES

- **Scanner Power Tools**

- **OCR Capabilities**

- **Barcode Features**

- **Cloud Connector**

- **Database Connector**

- **Sharepoint Connector**

- **Universal Email Connector**

- **Single-Sign-On to Print Management**

BENEFITS

Scan and convert documents

Drivve | Image makes it easy to turn scanned documents into searchable PDF or editable Microsoft Office formats. Intelligent and intuitive optical character recognition software facilitates the integration of scanned files into document management workflows. Scanned images can also be cleaned to remove common blemishes like hole punch marks and coffee stains.

Connect to the cloud

Drivve | Image allows users to scan to and retrieve documents from leading productivity solutions like Microsoft Office 365 (including OneDrive, SharePoint Online and Teams folders), Google G Suite, Box, and others, incorporating cloud-based file management systems into the digital document workflow.

Browse network folders

Search the authenticated network folder structure right from the scan-device screen. Drivve profiles can be customized to give each user their preferred experience. It can even create new digital network folders if they don't already exist. The Drivve solution is an easy to use document archiving system that will instantly create a corporate document repository.

Easy to configure

Drivve software is simple to install and configure, and scanning processes are easy to create and manage via the central server-based administration application.

User Profiles

Quickly create profiles for users and devices that customize the user experience. Restrict access to appropriate functions based on individual authentication at the scan device.

DRIVVE | IMAGE

Drivve | Image simplifies and streamlines document intensive processes, allowing companies to reduce costs and work more efficiently. The solution helps customers reduce steps when digitizing and routing paper documents. With Drivve | Image the MFP becomes a workflow engine that helps organizations save time, eliminate errors, and improve business processes.
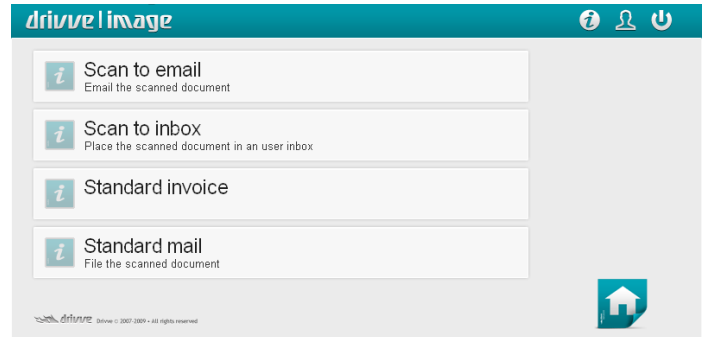

Common challenges such as lost documents, extended processing time, and security issues related to scanning via the firmware can all be addressed by adding Drivve | Image to the MFP. Instead of simply using the scan device to digitize a file and place it in a static location, Drivve helps dynamically route files to their destinations, whether to a unique customer folder, to a newly created SharePoint folder, or to other locations within an organization's management systems.

How does Drivve | Image software work?

Login to Drivve | Image at the device panel and access personalized profiles that allow for one-touch automated multi-step capture and routing processes.
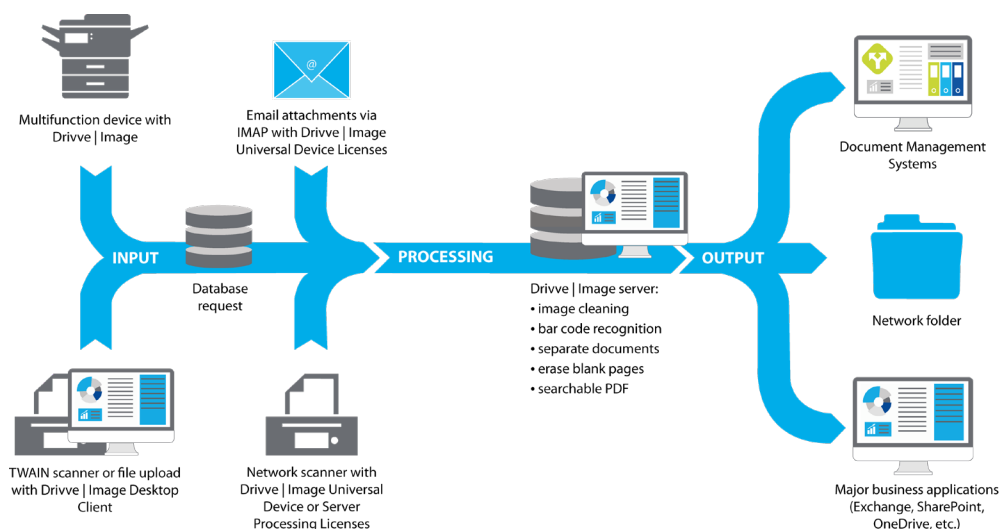

Parameters for naming, categorizing, and routing digitized documents can be enriched with zonal OCR, barcode recognition, or with supplemental data entered at the device panel.

Multiple solution configurations help customize document scanning capabilities to the customer's business needs and ensure an optimized document imaging process, enriched with relevant systems data and routed to the appropriate filing location within seconds.

Who should use Drivve | Image software?

Drivve | Image target customers are organizations looking to streamline document intensive business processes and cut document related processing costs. Organizations in industry verticals like healthcare, finance, legal, retail, manufacturing, government and education are typical target customers.

SPECIFICATIONS & CAPABILITIES

Scanner Power Tools
- Document naming
- Create searchable PDF documents
- Autorotation of documents
- Image cleaning
- Border crop
- Single-sign-on scanning
- Blank-page deletion
- Bates stamping
- Search function for network folders
- Browse to folder
- Metadata
- Print documents
- Separate documents

OCR Capabilities
- Create searchable PDF documents
- Create editable documents in Microsoft Word & Excel
- Autorotate documents
- Define zones and read only within these zones

Barcode Features
- Barcode reading
- Type and position detection
- Confidence level of barcode recognition
- Barcode orientations
- Separate documents with barcodes

Cloud Connector
- Scan to Microsoft Office 365 destinations (including OneDrive, SharePoint Online, and Teams folders)
- Googe Drive Personal & Professional integration
- Send scanned documents via Gmail
- Scan to Box and other WebDAV-based applications

Database Connector
- Connect to existing data sources
- Full text search

SharePoint Connector
- Scan to SharePoint

Email Connector
- Microsoft Exchange integration
- Supports multiple To, Cc and Bcc recipients
- Email notification
- Email and archive a document in one step
- Fax server connectivity

Lotus Notes/ Domino Connector
- Access address books within IBM Lotus Notes and Domino
- Optimize, email and file a document in one step

Single-Sign-On
- Built-in single-sign-on to print management solutions
